Education

Erasmus University, Rotterdam School of Management

Rotterdam, the Netherlands

PHD FINANCE

Sept 2022 - 2027

- PhD Intern — **International Monetary Fund**
- Visiting PhD Student — **Stockholm School of Economics - Swedish House of Finance**
- Summer School (**Northwestern University**): Research Design for Causal Inference, main + advanced workshop.
- Part of the Erasmus Initiative 'Dynamics of Inclusive Prosperity'.

Tilburg University

Tilburg, the Netherlands

SEVERAL PROGRAMS

- MSc Economics — Track: Sustainable Development, Cum Laude 2018-2019
- Visiting BSc student Universidad del Pacifico, Peru 2016-2017
- BSc Economics and Business Economics 2013-2017
- MSc Econometrics and Mathematical Economics (20% of program) 2022

Research

INTERESTS: Climate Finance, Demand-based asset pricing, Insurance

WORK-IN-PROGRESS

Optimal Time-Consistent Insurance Take-Up in Weather Exposed Housing Markets

Job-market paper

Presentations: ERIM PhD Seminar

Implicit insurance subsidies in housing markets protect households from growing weather damages but distort private insurance markets, undermining the long-run availability of insurance. I model a housing market with insurance intermediaries in a dynamic general equilibrium setting. High insurance take-up mitigates housing fire sales following a weather shock but generates insurance market crashes whose steepness is governed by the economy-wide marginal propensity to insure. A social planner internalizes the pecuniary externality of possible insurance market crashes, and the socially optimal insurance take-up is lower than in the unregulated equilibrium. The time-consistent social planner's actions can be decentralized with a subsidy or tax on insurance that aims to jointly mitigate housing fire sales and the frequency and magnitude of insurance market collapses. I further provide empirical evidence consistent with the amplifying role of insurer financing constraints in insurance market withdrawals.

Financial Stability and Natural Disasters under Endogenous Adaptation

with Christina Kolerus, Joana Pereira

Presentations: Banque de France, Stockholm School of Economics, IMF

We examine the effect of natural disasters (ND) on financial stability in insurance and mortgage markets when household adaptation is endogenous to changing financial conditions. We first empirically establish that ND reduce insurers' and banks' solvency and profitability metrics, although the effects for banks are small. Using a novel instrument based on reinsurance market shocks, we show that the sensitivity of bank financials to ND rises with the size of the insurance gap, revealing interaction effects. Using a structural model with heterogeneous households, we then analyze how the responses of banks and insurers following ND dynamically shape moral hazard and credit constraints, affecting investment in physical resilience against ND and therefore long-run financial stability. Consistent with the empirical results, disaster-driven default rates increase when insurance gaps grow. Yet, endogenous household adaptation substantially lowers the long-run financial consequences of ND relative to the counterfactual of no adaptation. We further illustrate the implications of moral hazard and credit constraints for the optimal mix between insurance- and adaptation subsidies when the aim is to reduce defaults. Our micro-founded model highlights how the interplay between regulation, frictions, and household behavior shapes the long-run financial consequences of ND.

Insuring against Natural Disasters - IMF Departmental Paper

with Zamid Aligishiev, Christina Kolerus, Junghwan Mok, Joana Pereira, and Svetlana Vtyurina

Hiding in plain sight: the concept of fiduciary duty in financial economics

with Conrad Heilmann, Marta Szymanowska

WORKING PAPERS

The Informational Role of Sustainable Investors

with Marta Szymanowska

Presentations: CuneF University Madrid*, FMA, French Finance Association Conference, Erasmus DoIP Seminar, Tri-City Bridge Workshop, ERIM PhD Seminar

Recent evidence suggests that sustainable investors may weaken information transmission into asset prices while being simultaneously classified as active traders. Using a demand-based asset pricing approach, we examine the behavior of sustainable investors and their impact on price informativeness. We find that sustainable investors are price elastic, enhancing informativeness by trading on both sustainable characteristics and long-term fundamentals. Stocks with strong sustainable demand exhibit greater price elasticity and responsiveness to idiosyncratic news, though this effect is weaker for green stocks, where sustainable investors trade less actively. Importantly, identifying sustainable investors outside a demand system misattributes passive demand as sustainable, distorting the estimated impact of sustainable investors. Overall, sustainable investors play a dual role: acting as active traders across their portfolios while behaving as preference-driven holders of the sustainable stocks.

* Presentations by co-authors

Professional Experience

- 2025 **PhD Internship**, International Monetary Fund.
Research on insurance markets in the Americas (June-Aug).
- 2021-2022 **Associate**, Aon - Strategy and Technology Group.
Advisory services to global insurance companies using data & analytics.
- 2019-2021 **Consultant - Emerging markets**, Larive International
Business development in high growth markets, including Sub-Saharan Africa and South-East Asia.
- 2013-2018 **Rowing athlete**, Tilburg University (top sports status)
Training +/- 25 hours per week and competing at (inter)national regattas.
- 2017-2018 **Board Member Rowing Association (Treasurer)**, T.S.R. Vidar

Awards and Nominations

- 2025 **FMA Annual Meeting**, Semifinalist best paper award
- 2019 **Finalist Jan Brouwer Thesis award**, MSc Thesis title: Precautionary saving and credit opportunities in Nigeria and Mongolia.
- 2019 **Cum Laude and top 5% of class MSc Economics**, Tilburg University

Talks

PRESENTATIONS

- 2026 Banque de France, Stockholm School of Economics, ERIM PhD Seminar
- 2025 CuneF University Madrid*, FMA, IMF, French Finance Association Conference, Erasmus DoIP Seminar, Tri-City Bridge Workshop, ERIM PhD Seminar
- 2024 Dutch Financial Economics of Climate Change Workshop, ERIM PhD Seminar

DISCUSSIONS

- May, 2025. The Cost of ESG Rating Uncertainty — French Finance Association Conference — Elise Gourier, Menglong Na.
- March, 2023. Erasmus Institute for Philosophy and Economics Research Seminar — Reflections on the 2022 Nobel Memorial Prize Awarded to Ben Bernanke, J. van't Klooster (2023).

Teaching Experience

- Fall 2025 **Investments II**, Teaching Assistant
Fall 2024 **Financial Modeling**, Giving workshops on option pricing, hedging and volatility models
Evaluation in 2024: 4.2/5.0
2022-26 **MSc thesis supervision Finance & Investments**, Acting as main supervisor of 15+ students
Evaluation in 2025: 5.0/5.0, 2024: 4.5/5.0
Fall 2023 **Financial Modeling**, Teaching Assistant
Fall 2022 **Financial Modeling**, Teaching Assistant
Fall 2022 **Corporate Finance**, Teaching Assistant

Refereeing

Journal of Risk and Insurance

Skills and interests

Programming: R, Python, Stata, Alteryx, $\text{\LaTeX}$.

Languages: English (fluent), Dutch (native), Spanish (B1 certificate, intermediate), German (basic).

Interests: Piano, Kitesurfing, Mountain biking, Reading.
